

Hadoop Administrator

April 10th 2020
10:00AM- 11:00 AM

Introduction:

The Big Data and Hadoop Ecosystem was a brainchild of Doug Cutting and Mike Cafarella, initially to support processing in the Apache Nutch open source search engine and web crawler.

However, today, it is used by almost every organization in the world, so much today that the world needs over 1.2 million Hadoop Administrators.

So many questions sit on the mind of IT enthusiasts who aspire to become Hadoop Administrators, they include:

- **What Skills does a Hadoop Administrator require?**
- **Can a Linux Administrator become a Hadoop Administrator?**
- **What is the Architecture of Hadoop?**
- **How do I install Hadoop Stack ranging from Pig, Hive, HBase, Spark, ZooKeeper, Oozie and many more?**

Agenda:

During the 1 hour webinar, we will review the following:

- What is Data?
- What problem is Hadoop solving?
- Big Data & Hadoop Overview, Concepts, Architecture, including Hadoop Distributed File System (HDFS)
- Things you must know to start learning Hadoop and Using Big Data
- Review of Hadoop Distribution: Cloudera vs Hortonwork
- Demo of a Hadoop Cluster
- Bootcamp Overview
- Question and Answer Session

Intended Audience:

This workshop is for anyone who want to pursue the career as Hadoop Administrator
